

Catch Clipboard

Catch Clipboard is a tiny Windows Program that automatically catches the contents of the clipboard (either an Image or Text).

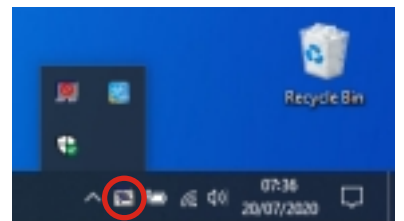

On initial run, it is not obviously visible as it will run in the “System Tray”.

It can be dragged from the System Tray Popup onto the Tray itself, and from then on whenever it is launched, will appear as an icon where positioned on the tray.

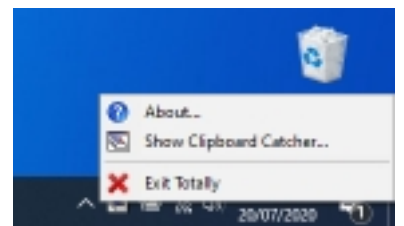

The actual User-interface is accessed from this icon by a Double-click of the Mouse.

A Right-click of the Mouse will pop-up a menu. One can either Show the main interface, or Exit totally.

Please Note: Closing the Clipboard Catcher from the main interface, does NOT exit, but instead, will hide it back down to the Tray Icon. It can only be terminated by Clicking the Menu Item.

As for the Main User Interface, all the buttons are hinted (mouse hover), and fairly easy to figure out.

This bit of software was developed for personal use, to compile presentations and user guides. I have decided to publically share it as a free Application.

Hope you find it useful - enjoy.

Jonathan
